13 NEW ARCADE-STYLE GAMES FOR POPULAR COMMODORE VIC 20
INCLUDES BALLY/MIDWAY AND SCOTT ADAMS ADVENTURE SERIES

--

Gorf, Omega Race, Wizard of Wor Now Available to Home Users Along with Wide Range of 'User Friendly' VIC 20 Peripherals

VALLEY FORGE, PA, September,7 1982 -- Thirteen exciting new cartridge games -- including three Bally/Midway arcade games -- for the phenomenally popular VIC 20 home computer are being featured by Commodore Computer at the INFORMATION MANAGEMENT EXPOSITION at the New York Coliseum October 11-24.

Also featured at the Commodore booth, No. 2033, is a complete range of peripheral products for the VIC 20, including a single disk drive, graphic printer, VICMODEM and 16K memory expansion cartridge. These user-friendly low-cost peripherals give VIC home users the capabilities that used to be available only on complex and costly computer systems. With these peripherals and appropriate software, users can do word processing, learn programming, track finances, create their own games, or tune into telecommunications networks -- to name a few possibilities.

The Bally/Midway games being shown on cartridge -- Gorf, Omega Race and Wizard of Wor -- are real arcade games. High resolution graphics, sound effects and play action are exactly like the popular Bally/Midway coin-operated games. Commodore's own Space Vulture, Raid on Fort Knox and Pinball Spectacular are also on view. They have the same kind of fast action and exciting graphics as the arcade games. Mole Attack and The Sky is Falling, Commodore's new children's cartridge games, engage tots with faster and faster action.

13 NEW ARCADE-STYLE GAMES FOR POPULAR COMMODORE VIC 20
INCLUDES BALLY/MIDWAY AND SCOTT ADAMS ADVENTURE SERIES

Commodore will also introduce five challenging Scott Adams adventure games -- Adventureland Adventure, Pirate Cove Adventure, Mission Impossible Adventure, The Count Adventure and Voodoo Castle Adventure. These games, previously available only for high-priced systems, are cumulative fantasy games that can be saved and played over a long period of time.

Since the VIC 20 was introduced in 1981, its capabilities have continued to grow at a tremendous rate. VIC users can now learn the fundamentals of computer programming at home using Commodore's "Introduction to BASIC" manuals and tapes. More advanced programmers have great flexibility for designing programs and creating graphics and sound effects, with the use of the Super Expander cartridge, Programmable Character Set Editor and VICMON machine language cartridge. Now that the VICMODEM cartridge can transform the VIC into a telecommunications terminal, businessmen, students, farmers and hobbyists have access to all the capabilities of a huge mainframe computer right in their own livingroom.

Commodore Business Machines, Inc., is a wholly owned subsidiary of Commodore International Ltd. (NYSE:CBU), a fully-integrated manufacturer of advanced microcomputer systems, consumer electronics products, semiconductors and office equipment. Commodore's Computer Systems Division markets the Commodore MAX Machine™, VIC 20™, Commodore 64™, PET®, CBM™ and SuperPET™ computer systems and software to major accounts and stores.
